SteriTatt®

Medical Marking Devices

Convenient, easy to use applicator to help regulate the flow of ink.

SteriTatt®

Maximizes Patient Safety

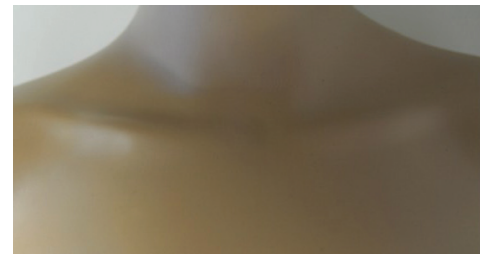

Each SteriTatt device contains sterile, non-toxic, low-allergy ink that is safety-sealed and gamma irradiated, guaranteeing sterility and ensuring the highest quality of patient care

Differentiates New Areas from Previous Treatment Sites

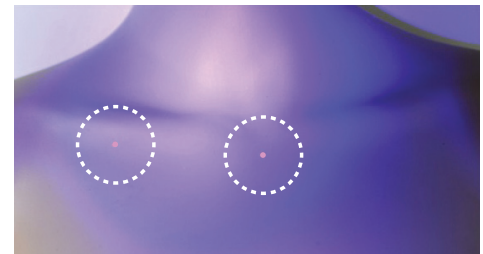

SteriTatt offers black and pink ink. Different ink colors can be used to identify different areas of treatment or differentiate new areas from previous treatment sites. UV pink ink is only visible under UV light allowing patients to not have unsightly marking tattoos.

Standardizes the Administration of Tattoos

SteriTatt's pen-like design offers ease and comfort of use and helps standardize the methods therapists use to mark the skin.

Without UV Tattoo Light, UV Pink Ink is not visible.

With UV Tattoo Light, UV Pink Ink is visible.
