

positioning  
patients for life.®

September 9, 2016

Dear Valued Customer:

In 2013, the FDA issued a “final rule” to establish a system to adequately identify medical devices through distribution and use. This final rule requires the label of medical devices to include a unique device identifier (UDI), except where the rule provides for an exception or alternative placement. The UDI system<sup>1</sup> is expected to create a common vocabulary for reporting, improve patient safety, and ensure compliance with key regulations. The rule makes it possible to rapidly and definitively identify a device and key attributes that affect its safe and effective use.

To comply with the timeline and expectations of the FDA’s final rule on UDI, Qfix has reviewed our product portfolio and adapted our business processes and systems to meet UDI implementation requirements. To align our operations with UDI, Qfix is implementing standard quantities of Thermoplastic products per package. We would like to take this opportunity to give you advanced notification of changes that you will see so that you can prepare your internal operations accordingly. All affected products are listed on the enclosed attachment. Please note that effective, September 13, 2016, we will no longer accept orders that are not consistent with these quantities. This change will be in effect for all orders placed by hospitals, healthcare institutions and distributors.

As always, we are committed to providing you, our valued customers, with the highest level of quality and service. In order to ensure a smooth transition, your local sales manager and customer service representative is available to provide assistance and answer any questions you might have.

Thank you for working with us to comply with these newly mandated regulations for UDI. We appreciate your continued support of Qfix and our positioning and immobilization solutions for radiation therapy.

Sincerely,

Susan DiNapoli  
Director, Marketing & Organizational Excellence
